

Bhoge Sai Nivas Reddy

Full Stack Developer | AI Engineer

bhogesainivas@gmail.com | +91 8886176540 | Open to Relocation | [GitHub](#) | [LinkedIn](#) | [LeetCode](#) | [Portfolio](#)

Full Stack Developer and AI Engineer focused on building scalable web applications, AI agents, and real time systems. Experienced with React.js, Node.js, FastAPI, LangChain, LangGraph, Pinecone, Socket.IO, and WebRTC through hands on projects involving RAG pipelines, AI automation, and system optimization. Passionate about solving real world problems, learning fast, and building products that can scale to thousands of users.

AREA OF EXPERTISE

Python • JavaScript • TypeScript • SQL • React.js • Redux Toolkit • Tailwind CSS • Node.js • Express.js • FastAPI • REST APIs • MongoDB • PostgreSQL • LangChain • LangGraph • RAG • Pinecone • Gemini API • Embeddings • Prompt Engineering • WebRTC • WebSocket • Socket.IO • Git • GitHub • Docker • AWS S3 • GitHub Actions • Data Structures and Algorithms

PROJECTS

AI Agent for Automated Email & Calendar Scheduling

[Website](#) | [GitHub](#) | Dec 2025

LangGraph, FastAPI, React.js, MongoDB, Google OAuth 2.0

- Built an AI agent for email and calendar automation using LangGraph, FastAPI, React.js, and MongoDB with Gmail and Google Calendar API integration. Added Google OAuth 2.0 authentication, human in the loop workflows, long term memory for feedback retention, and persistent checkpointing to continue workflows after interruptions.
- Developed an email triaging system that classifies emails into Ignore, Respond, and Notify categories, generates contextual draft replies, and automatically schedules meetings based on email context.
- Optimized the backend data pipeline and database fetching flow, reducing end-to-end latency from around 10–13 seconds to 3–5 seconds for both agent processing and frontend update.

Github RAG System

[Website](#) | [GitHub](#) | Oct 2025

LangChain, Python, Pinecone, FastAPI, React.js, Gemini 2.5 flash

- I built a full stack web application that helps developers understand GitHub repositories by asking questions about the code.
- Developed a React frontend with GitHub URL validation and chat interface. Created a FastAPI backend that downloads repos, chunks code, stores in Pinecone vector database, and uses Google Gemini API to answer questions chaining with Langchain. The system finds relevant code sections and returns AI generated answers with source references. Supports multi turn conversations with full context awareness.

Multi User Video Chat

[Website](#) | [GitHub](#) | Nov 2025

React.js, WebRTC, Socket.io, Node.js

- Built a real time video chat application in React using WebRTC, supporting multi user video, audio communication, simultaneous screen sharing, in room chat, adaptive UI layouts, multi stream rendering, and live participant status indicators for audio, video mute states.
- Developed a custom Socket.IO signaling server handling SDP negotiation, ICE candidate exchange, media track management, room based peer discovery, stream renegotiation, and real time user state synchronization for seamless peer to peer communication.

Food Delivery Platform

[Website](#) | [GitHub](#) | Jan 2026

React.js, Node.js, MongoDB, Tailwind CSS, Google OAuth 2.0, Redux Toolkit, REST APIs, Socket.io, JWTs

- Built a food delivery and restaurant management platform using the React.js, Node.js with JWT authentication and Google OAuth 2.0. Implemented restaurant profile and menu management, real time order handling and tracking using Socket.io, menu browsing with search, filters, and customizations, Razorpay payment integration, review system, favorites feature, push notifications for order updates, and delivery scheduling with time slots.
- Implemented a Redux Toolkit for state management across 15+ global state slices. Strict Role Based Access Control (RBAC) across 20+ REST API endpoints with optimized MongoDB schemas and aggregation pipelines.

EDUCATION

B.Tech (Electronics and Communication Engineering)

2021 – 2025 | Delhi-NCR

Shiv Nadar University

CERTIFICATES

[Ambient Agents with LangGraph](#) | [LangChain Academy](#)

Oct 2025

[LangChain for LLM Application Development](#) | [DeepLearning.AI](#)

Sep 2025
